

TELCOSYSTEMS - LOUDTHINGS

TELCOYSTEMS / LOUDTHINGS / 35mm / 14 min / 2008

An audiovisual account of an expedition into the innards of the computer. Using a set of elementary instructions such as modulation, masking, and feedback, Telcosystems programmed a self-organizing network of algorithmic processes for the creation of spatial image and sound. The result is a non-referential world which strains the senses; an exploration along the borders of human perception, through worlds of multiplying and mushrooming clouds of light and sound, through worlds of mesmerizing spatiality and interferring landscapes.
